METRIC as a SERVICE

THE FUTURE OF PARKING AND CHARGING SOLUTIONS

Our Story

METRIC is first and foremost a technology company. We design and develop new and innovative solutions for the parking and transport sectors.

METRIC have a long history of being at the forefront of design and innovation, our company has produced many firsts from the first ticket machine to allow overlapping fare stages and first all-electronic desktop calculator to the world's first electronic pay & display machine.

We are innovators and early adopters of the latest technologies to bring our customers the very best. METRIC were the first to develop contactless bank payments on pay & display parking terminals years before it became mainstream payment option.

As we move forward, we are using our technology to enable payments in "difficult" locations through the use of open banking and cashless payment systems.

1878

Our heritage dates back to the Bell Punch Company

1000

customers worldwide that trust us to deliver access and parking solutions

25,000

ticketing systems across Europe

60,000

parking terminals worldwide

- 2020 - Over 10 million electric cars globally
- 4.6% of all registered vehicles
- 3 million new electric cars were registered
 - Europe - 1.4 million registrations
 - China - 1.2 million registrations
 - United States - 300 000 registered
- By 2030 there will be 300m Electric Vehicles on the road - 60% of all vehicles

AC CHARGING - MICRO PAYMENT TERMINALS

Combined Payments Solution for EV Charging & Parking

With one payment terminal you can link multiple charge points to the device, allowing users to make payment either up front or via a 'tap in, tap out' basis, which will activate the charger accordingly.

Micro provides ticketless and cashless solution with a low cost payment terminal

Integrated contactless credit card reader managing payments

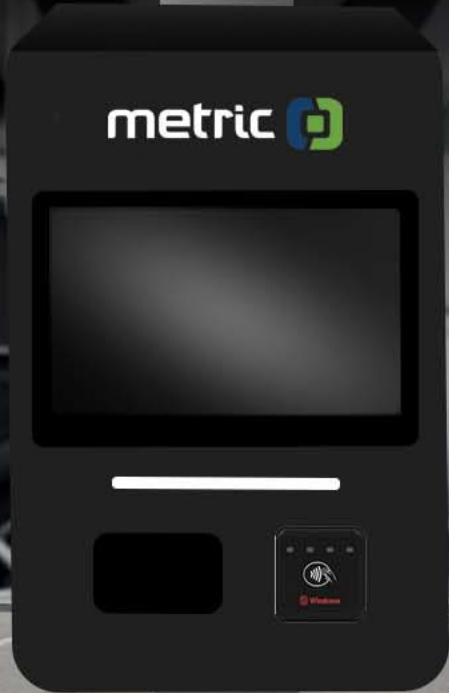

Allows control of multiple EV chargers with multiple charging guns

Or you can scan the QR Code on the public charge point with your phone, and pay via your saved payment cards in the Metric App. The Metric App is a unique EV charging platform, providing you the ability to utilise public charging capabilities.

HOW IT WORKS

Install, and connect, one Metric Group payment terminal to multiple AC charge points across your car park. Allowing users to pay for both their charging & parking, safely and securely, through contactless payment.

SAFE & SECURE

THE BAYWATCH EYE

Our Baywatch technology cameras offer excellent image quality and are packed with a bundle of features to further benefit securing your Electric Vehicle parking bay.

Whether it's night or day our Baywatch Eye will always be watching, ensuring each customer has a safe protected charging experience on your premises.

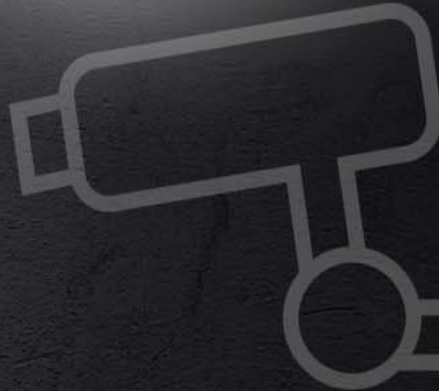

HDTV 1080p

Two-way Audio and I/O
Connectivity

Always there to protect your
parking bay

DETER PARKING ABUSE & VIOLATIONS ON YOUR PROPERTY
WITH THE **BAYWATCH EYE**

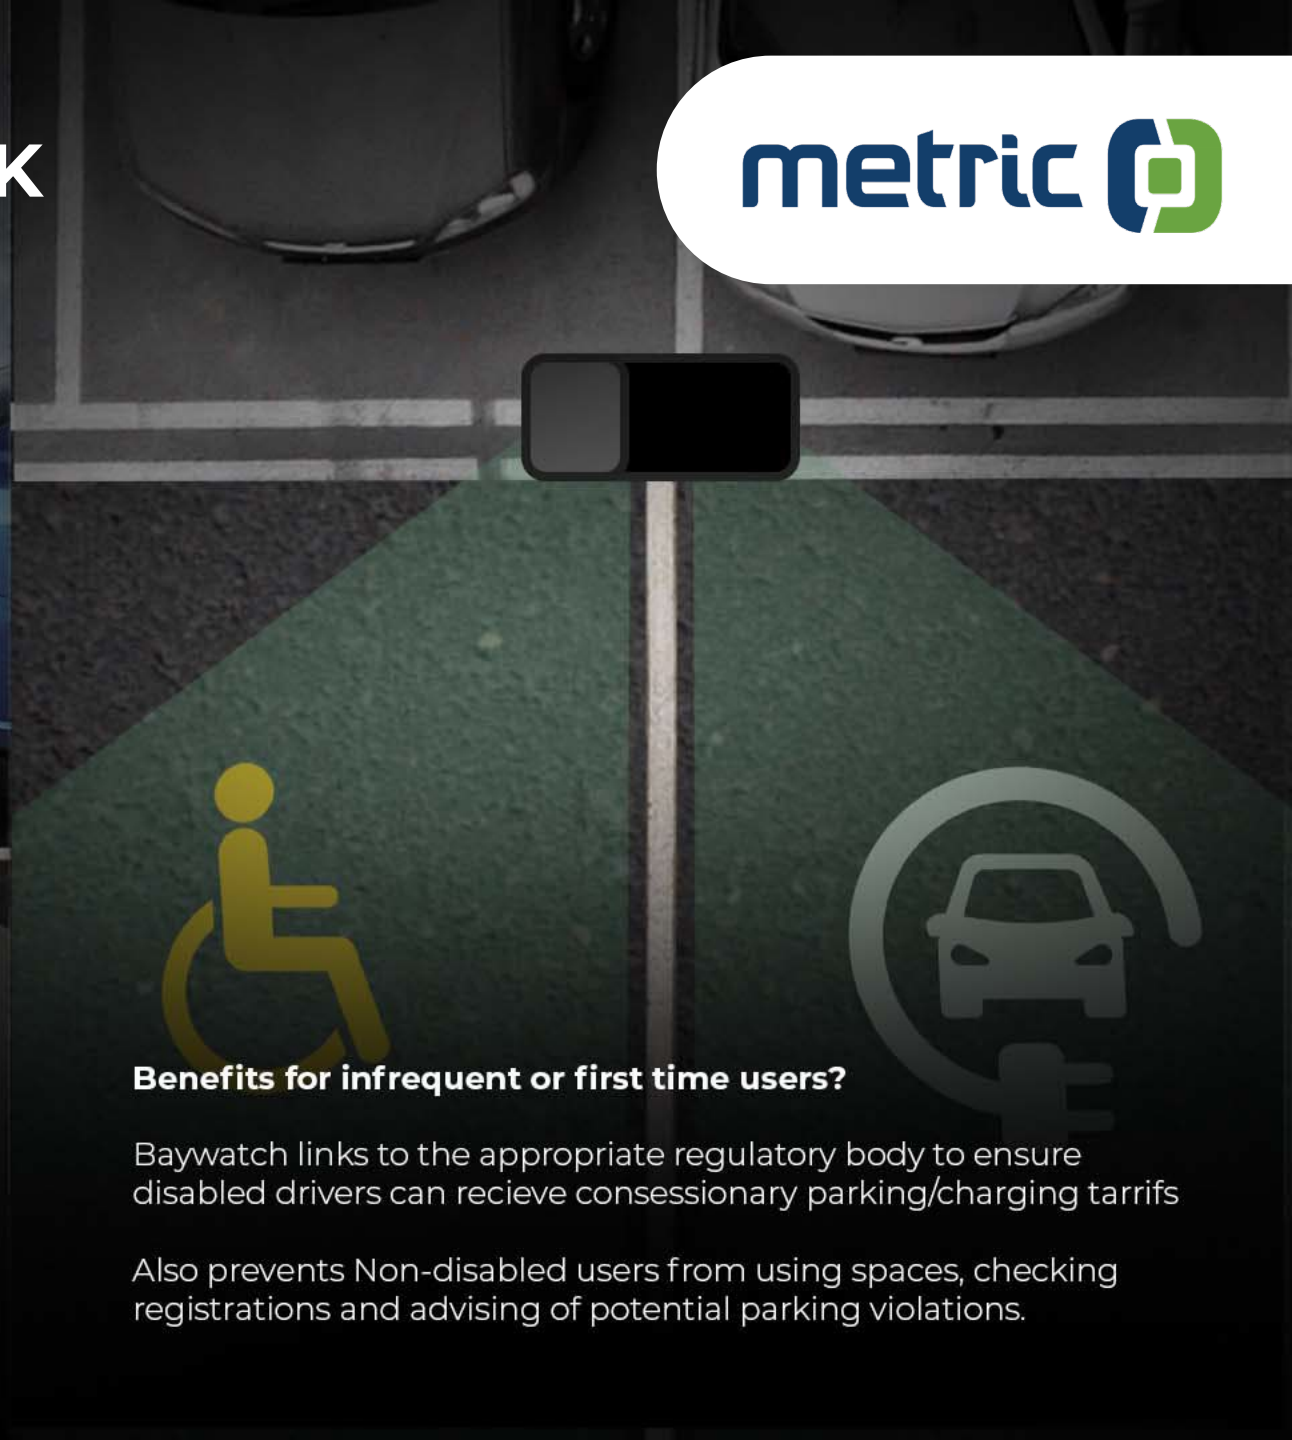

HOW DOES BAYWATCH WORK

The First Step?

Implement Baywatch technology in to your Electric Vehicle bays.

Disabled and EV driving customers can register as 'Baywatch' users via your customer service desk or portal, allowing them to book and reserve spaces if they regularly frequent your business.

Benefits for infrequent or first time users?

Baywatch links to the appropriate regulatory body to ensure disabled drivers can receive concessionary parking/charging tariffs

Also prevents Non-disabled users from using spaces, checking registrations and advising of potential parking violations.

EV & Battery Storage Solutions

Create Carbon Credit

Combine the kilowatt hours generated across your electric vehicle charging network and convert your clean energy into carbon credits.

What is a Carbon Credit?

A carbon credit represents the right to emit a measured amount of Greenhouse Gas.

'According to the **Corporate Credit Institute**, a carbon credit is a tradable permit or certificate that provides the holder of the credit the right to emit one ton of carbon dioxide or an equivalent of another greenhouse gas. The main goal for the creation of carbon credits is the reduction of emissions of carbon dioxide and other greenhouse gases from industrial activities to reduce the effects of global warming.'

'According to the **Carbon Fund**, a carbon credit is an instrument that represents ownership of one metric tonne of carbon dioxide equivalent (using co2 as a unit to measure different greenhouse gases) that can be traded, sold or retired.'

INTERGRATED **PARKING SOLUTIONS**

PAYMENT TERMINAL

METRIC Micro

- 10.1" touch screen
- Contactless card payments
- QR code reader
- Connectivity with ANPR systems for enforcement
- Integration and payment to EV charging systems
- Dynamic tariff and emissions-based charging
- Online connectivity with Metric back office
- Web receipt customer portal

ACCESS CONTROL

METRIC IQ

- Access control system with integrated ANPR
- Linked to back-office systems for automated operation
- Intercom
- Handheld remote control for support staff
- Dual radar detection

Metric is Disrupting the Market with our Partner

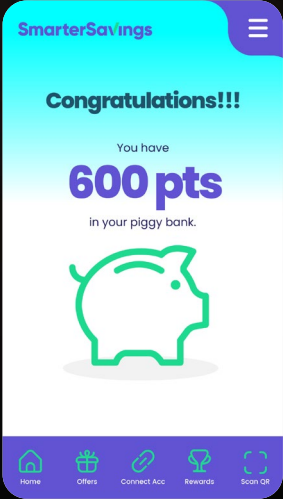

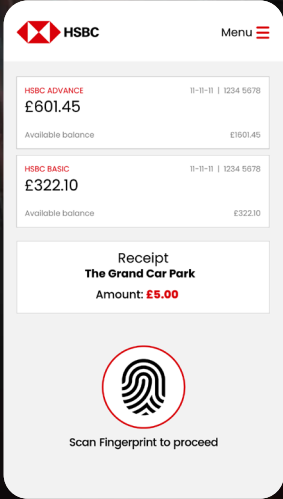

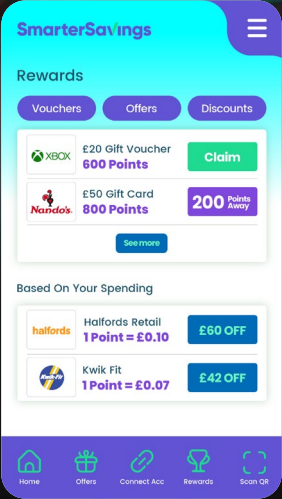

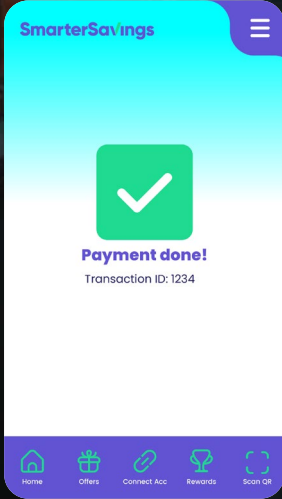

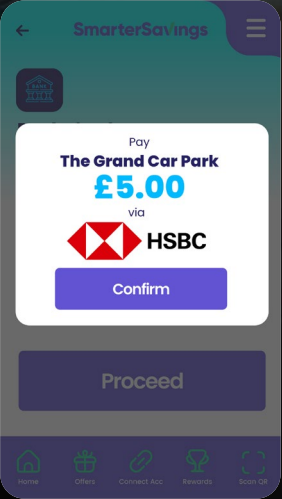

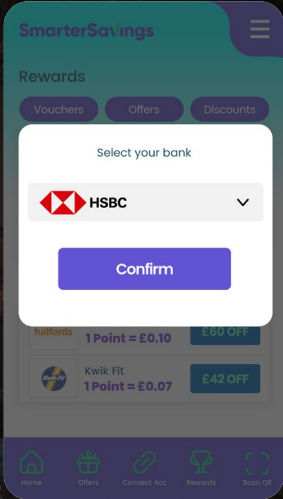

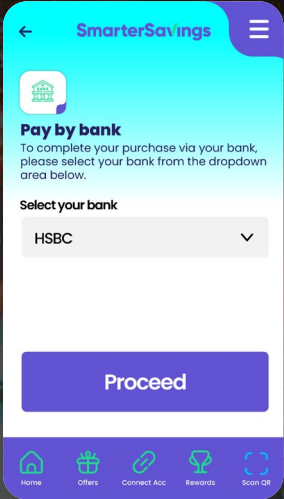

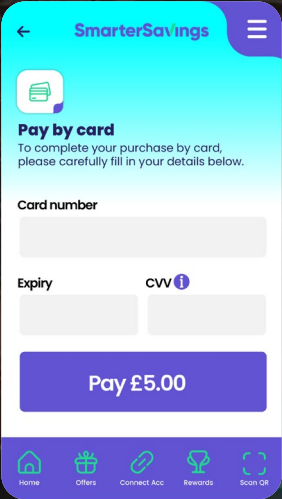

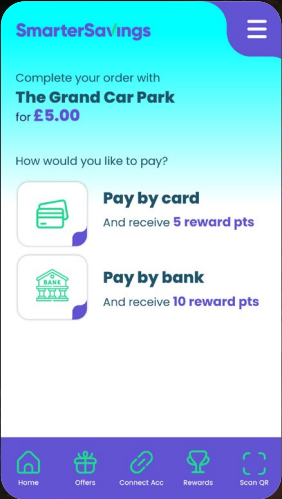

Evolving to a Open Banking Payment Solution

Metric Group Limited on average have 80m card transactions per year of which 60m of these are debit card payments.

These will be migrated to **Open Banking** payments

Our Partners Customer Journey is User Friendly and Rewards Customers for Loyalty

Why METRIC Group?

Adding Value & Innovation

- ⌘ Experience, longevity, global presence
- ⌘ Leveraging best in class technology as it evolves
- ⌘ Fully funded or joint venture funded options
- ⌘ Provide a revenue share from each KHW charged
- ⌘ Service and maintain your EV infrastructure for the full contract term
- ⌘ Dedicated customer support team / account manager
- ⌘ Customised customer app with your branding / logos
- ⌘ Provide a complete back-office EV charging management portal
- ⌘ Grow your EV charging infrastructure as demand increases.
